

We are aware of an issue with running DIKUArcade on ARM Macs, when attempting to run your game with `dotnet run` you will see the following error:

```
Unhandled exception. System.DllNotFoundException: Unable to load
shared library 'glfw' or one of its dependencies. (...)
```

Luckily this can be fixed!

First you must install a few libraries:

```
$ install glfw
$ install mono-libgdiplus
```

Then you must update your `.zprofile` with the following command:

```
$ echo 'export DYLD_LIBRARY_PATH=/opt/homebrew/lib' >> ~/.zprofile
```

Restart your terminal, and you should be able to play your game using `dotnet run`.
