We are aware of an issue with running DIKUArcade on ARM Macs, when attempting to run your game with dotnet run you will see the following error:

Unhandled exception. System.DllNotFoundException: Unable to load shared library 'glwf' or one of its dependencies. (...)

Luckily this can be fixed!

First you must install a few libraries:

- \$ install glfw
- \$ install mono-libgdiplus

Then you must update your .zprofile with the following command:

\$ echo 'export DYLD_LIBRARY_PATH=:/opt/homebrew/lib' >> ~/.zprofile

Restart your terminal, and you should be able to play your game using ${\tt dotnet}$ run.
